}
}
```

模型配置参数说明

格式: json {"parameters": {字段名: 字段值}},字段值都是string类型,支持的字段和字段值说明如下:

字段名	含义	默认值、是否必填
type	str,表示模型所属的类型,两类可选 [dataelem.pymodel.huggingface_model, dataelem.pymodel.elem_model] 前者表示huggingface的模型格式,对应huggingface的模型仓库要求格式 后者表示DataElemu定义的模型格式,规范如下: tensorflow模型:模型文件夹/{model.graphdef, model_def.json} model.graphdef是freeze格式的模型 pytorch模型:模型文件夹/{model.pt, model_def.json}	无,必填
pymodel_type	str,表示具体的模型类,支持如下类型 embedding.ME5Embedding embedding.BGEZhEmbedding llm.BaichuanChat llm.ChatGLM2 llm.Llama2Chat llm.QwenChat mmu.VisualGLM layout.LayoutMrcnn table.MrcnnTableDetect table.TableCellApp table.TableRowColApp ocr.PPOCRCollectionV3 [V4] (待支持) ocr.ElemOCRColletionV1 (待支持)	无,必填

pymodel_params	str, 表示模型的初始化参数,要求是一个符合json格式的字符串例如"{\"max_tokens\": 4096}"	"{}",选填
gpu_memory	str,表示模型需要的gpu显存总大小,单位为GB	无,必填
instance_groups	str,表示gpu的分配策略 格式要求: device=gpu;gpus=id1[,id2]+[id3[,id4]+] 举例说明: - device=gpu;gpus=0 表示在0卡申请gpu_memory大小的显存 - device=gpu;gpus=0,1表示在0,1卡每张卡申请gpu_memory/2大小的显存 - device=gpu;gpus=0,1,2表示在0,1,2卡每张卡申请gpu_memory/3大小的显存 - device=gpu;gpus=0 1 2表示在0,1,2卡上各自启动1个模型推理实例,并且每张卡上申请gpu_memory大小的显存 - device=gpu;gpus=0,1 1,2表示启动2个模型推理实例,第一个实例需要使用0,1卡,第二个实例需要1,2卡	无,必填
precision	str,表示推理的精度,默认是fp16,支持fp16,fp32 是否支持int4,int8依赖特定模型,一般不推荐使用	"fp32",选填
